

CONSTRUCTION

World-class, scalable construction solutions. Building. Better.

Construction solutions are not one-size-fits-all, particularly when resources are scarce and construction needs run the gamut from small, but critical, property improvements to ground up, customized solutions. Partnering with a team that understands your project, budget and timeline is paramount to success.

ERES Construction was founded on the principle that "building better" starts with a passion for delivering high quality, scalable services that meet your specific needs. Our approach to construction projects of all shapes and sizes includes meticulous planning, quality materials, experienced staff, utmost safety and exceptional results.

Most of our work is done in-house or in conjunction with trusted partners with the end goal of maintaining quality and communication throughout every stage of a project. That's the ERES difference.

We are licensed general contractors in Colorado, North Dakota and Texas, and are licensed FAA-compliant drone operators.

Our core services include:

- Commercial Construction Services
- Maintenance
- Large- and Small-Scale Tenant Improvements
- Procurement
- General Contractor Services
- Stick-Built Structures
- Safety Programming
- Drone Services

In addition, ERES provides a full suite of real estate and consulting services. As you move beyond the construction phase of your project, we are poised to help you with your next step including selling, leasing, or managing your property.
